 - Garbage
 - Empty the Hairvac.
 - A/C filter.
 - Check A/C Filter coils.
 - Tidy shelf and hanging baskets.
-

Detailed Explanation:

** See Daily Cleaning List for detailed steps to start

Ensure the side doors and back doors are open. Blow out the main grooming area, then take the HV hose and stick the nozzle into the hole under the tub where the drain pump sits. Move it side to side for a minute or two to blow out any hair that has gotten behind the water tanks. You can also take the HV hose and use it to blow out the equipment area to remove any residual hair.

While running the Bathing Beauty in the tub, depending on the floor mat type, if applicable, they can be washed and hung inside the tub.

When wiping down the wall behind the table, make it easier to clean by having the table all the way to the floor.

The Hairvac should be emptied at least once a week, if not daily, depending on how many haircut dogs you have.

Vacuum the A/C filter and then remove it from the unit. Rinsing with water is more than adequate, but it can be soaked with Ammonia-based Windex if it is very dirty. Shake it out and replace it.

Check A/C coils while the filter is removed. Gently vacuum off any residual hair if necessary.
